Python and Data Analytics Intern

PROFILE

Undergraduate student at Loyola Institute of Technology and Management building practical solutions with Python, SQL, data warehousing, Power BI, and AI integrations. Skilled in data cleaning, transformation, visualization, analytical SQL, backend fundamentals, and prompt engineering, with hands-on projects spanning agent workflows and end-to-end retail analytics.

TECHNICAL SKILLS

- **Programming & Data:** Python, SQL, T-SQL, SQL Server, REST APIs, data cleaning, data transformation, exploratory data analysis
- **Analytics & BI:** Microsoft Excel, Power Query, PivotTables, Power BI, DAX, data visualization, business analytics, KPI reporting, time intelligence
- **Backend & AI:** Pydantic, asynchronous programming, LLM APIs, SDKs, prompt engineering, context engineering
- **Tools:** Docker, Git, GitHub, SQL Server Management Studio (SSMS)

EDUCATION

Loyola Institute of Technology and Management
B.Tech CSE

India
2023 — 2027

PROJECTS

Olist Retail Analytics System

- Built an end-to-end retail analytics platform for 100K+ e-commerce orders using SQL Server, T-SQL, Excel Power Query, and Power BI.
- Implemented Medallion Architecture with bronze, silver, and gold layers; performed ingestion, deduplication, type casting, null handling, category translation, and star-schema modeling.
- Created analytical SQL for revenue leakage, RFM segmentation, seller reliability, cohort retention, Pareto analysis, rolling averages, and outlier detection; delivered a 3-page executive Power BI dashboard with DAX measures and time intelligence.

Data Warehouse Project with SQL

- Designed a modern SQL Server data warehouse using bronze, silver, and gold layers, batch ETL procedures, cleansing, standardization, normalization, derived columns, and enrichment.
- Modeled integrated CRM and ERP data into fact and dimension tables using a star schema; documented data lineage, data catalog, naming conventions, and architecture diagrams.

AgentForge

- Developed a modular Python agent framework with pipeline orchestration, a reusable tool registry, utility modules, and an extensible calculator tool.
- Structured the codebase into core, tools, and utils packages to support maintainable agent workflows and future LLM/API integrations.

CERTIFICATIONS

- **Agentic AI and Generative AI Fundamentals** — Databricks
- **Python Essentials** — Cisco Networking Academy
- **Microsoft Power BI Data Analyst** — Coursera
